

Solar Smart Solar Pool Heating

A Warm Pool is Well Used!

Aquasol, a division of Best Buy Pool Supply, LLC

Recreation

A warm pool means more enjoyment for you and your family.

Exercise

A warm pool allows you an early morning workout or a late night swim. Solar heating extends your pool swimming season and will let you enjoy early spring and late fall in your pool, as well as summer months

Relaxation

Use your pool after work or enjoy some special moments and quiet times with your close friends and family.

Savings

Save on energy costs and use clean 'green' solar energy. A solar pool heating system creates no pollution, and the fuel is free sunshine.

Quality

Aquasol solar collectors are made from a specially-formulated polymer designed to withstand extreme exposure to weather, ultraviolet rays, and oxidation. These solar panels are impervious to pool chemicals and will not corrode, pit, nor discolor your pool or spa. They have a proven life expectancy in excess of 20 years.

Simplicity

The Aquasol solar heating system utilizes your pool's existing filtration pump and works by pumping your water through the collectors, which are heated by energy from the sun and returned to your pool. The Aquasol automatic controller does this automatically when solar energy is available and keeps your pool water at the desired set temperature.

Don't use fossil fuels to heat your pool
Use clean solar energy!

Cross section of Aquasol collector showing the closely spaced tubes and interconnecting webs, which expose more surface area to the sun, resulting in higher performance. The interconnecting webs also relieve the thermal stress of expansion and contraction, assuring years of trouble-free operation
